To use this tutorial at your terminal, create a data set called `prefix.SAMPLE1.ASM` that is a sequential data set of one track, with DCB characteristics of RECFM=FB, LRECL=80, BLKSIZE=3120. Copy the source code from `SYS1.SAMPLIB(IKJSAMP1)` into your data set.

How to Use This Tutorial

In this tutorial we would like to ignore surface tension effects between the wall and interface. We can do this by setting the static contact angle, and the velocity scaling function to 0. However, the simpler option which we shall choose here is to specify a zeroGradient type on alpha.water, rather than use the alphaContactAngle boundary condition.

Introducing the 0.96 inch OLED display. The organic light-emitting diode (OLED) display that we'll use in this tutorial is the SSD1306 model: a monochrome, 0.96-inch display with 128x64 pixels as shown in the following figure. The OLED display doesn't require backlight, which results in a very nice contrast in dark environments. Additionally, its pixels consume energy only when they are on, so the OLED display consumes less power when compared with other displays.
