Chilean architect Alejandro Aravena (born 1967) founded Elemental in 2001 in Santiago with the goal of directly alleviating social deprivation.

Elemental: Incremental Housing and Participatory Design ...

Alejandro Aravena (1967 Santiago de Chile) founded Elemental in 2001 in his hometown with the goal of alleviating social deprivation directly instead of hoping for a balance of income relations.

ELEMENTAL: Incremental Housing and Participatory Design ...

I argue that Alejandro Aravena ' s work in Villa Verde is a practical design response to an unmet need for low-income housing, and addresses the major shortcomings of past incremental housing projects via its emphasis on open-sourced, supplementary design and construction support.

Elemental and the Case of Villa Verde: Incremental Housing ...

Aravena and the Elemental group are known for building " incremental housing, " a form of basic affordable housing in economically vibrant urban locations and realized in part with government subsidies.

Architectural Philosophy: Alejandro Aravena's Approach to Affordable Housing

What began as an academic initiative to improve the quality of life of poor strata of the population has meanwhile become a professional "do tank" offering services that cover the entire spectrum of urban development. Alejandro Aravena (*1967 in Santiago de Chile) founded Elemental in 2001 in his hometown with the goal of alleviating social deprivation directly instead of hoping for a balance of income relations. Besides building public facilities and public housing, Elemental also develops new approaches for the reorganization of resources and the potential of cities by means of projects devoted to infrastructure and transportation. This publication documents the social activity and history of the international architectural team and sheds light on its financing strategies, for example through participative building. 15th International Architecture Exhibition, Venice, May 28-November 27, 2016

A spectacular, visually rich monograph on one of the most visionary architecture firms of the twenty-first century led by 2016 Pritzker Prize-winner Alejandro Aravena Elemental, based in Santiago, Chile, epitomizes a new generation of pioneering, socially engaged architects. The firm specializes in innovative, powerful, and humane public-interest projects, working on both large and small scales across Chile, the United States, Mexico, Switzerland, and China. Featuring stunning images by renowned architectural photographers together with sketches and drawings from Aravena's personal notebooks, this book beautifully, often irreverently, displays Elemental's unique working methods and philosophy. Each project - from iconic structures like the Anacleto Angelini UC Innovation Centre to seaside residences and pioneering reconstruction plans - is accompanied by Aravena's engaging texts, bringing to life his understanding of civil society and the built environment. From the publisher of Snaakitecture, Grafton Architects and Concrete.

What began as an academic initiative to improve the quality of life of poor strata of the population has meanwhile become a professional "do tank" offering services that cover the entire spectrum of urban development. This publication documents the social activity and history of the international architectural team and sheds light on its financing strategies, for example through participative building0EXhibition: 13th International Architecture Exhibition, Venice, Italy (29.8.-25.11.2012).

Elemental is an initiative creating innovative solutions for subsidized housing. The programs urban projects aim to improve social housing for poverty stricken families. Elemental organized an international architecture competition which resulted in 7 constructed projects throughout Chile as hybrids between house and building, pushing the limits of expansion and density. Built in central areas, these houses are half-constructed, offering the inhabitants the infrastructure to extend the house to personal needs. This book is fascinating study of the successes and failures of the 'Element Houses.'ELEMENTAL is a Do Tank affiliated with the Pontificia Universidad Catlica de Chile and COPEC, implementing urban projects for social interest and public impact.

"Published on the occasion of the exhibition ... organized by Cooper-Hewitt, National Design Museum, Smithsonian Institution, and presented at the United Nations, October 15, 2011-January 9, 2012."--Colophon.

Sprawling beneath the Acropolis, modern Athens is commonly viewed in negative terms: congested, ugly and monotonous. A Mediterranean version of "informal" urbanism prevalent throughout the so-called developing world, Builders, Housewives and the Construction of Modern Athens reassesses the explosive growth of post-war Athens through its most distinctive building type, the polykatoikia, a small-scale multi-storey apartment block (from poly meaning "multiple" and oikos meaning "house"). Theocharopoulou re-evaluates the polykatoikia as a low-tech, easily constructible innovation that stimulated the post-war urban economy, triggering the city's social mid-twentieth century transformation, enabling the migrants who poured into Athens to become urban citizens, aspiring to a modern life. The interiors of the polykatoikia apartments reflect a desire for modernity as marketed to housewives through film and magazines. Regular builders became unlikely allies in designing these polykatoikia interiors, enabling inhabitants to exert agency over their daily lives --and the shape of the post-war city. Theocharopoulou's reading draws on popular media as well as urban and regional planning theory, cultural studies and anthropology to examine the evolution of this phenomenon and, in light of Greece's recent financial crisis, considers the role polykatoikia might play in building an equitable and sustainable twenty-first-century city.

Design Like You Give a Damn [2] is the indispensable handbook for anyone committed to building a more sustainable future. Following the success of their first book, Architecture for Humanity brings readers the next edition, with more than 100 projects from around the world. Packed with practical and ingenious design solutions, this book addresses the need for basic shelter, housing, education, health care, clean water, and renewable energy. One-on-one interviews and provocative case studies demonstrate how innovative design is reimaging community and uplifting lives. From building-material innovations such as smog-eating concrete to innovative public policy that is repainting Brazil ' s urban slums, Design Like You Give a Damn [2] serves as a how-to guide for anyone seeking to build change from the ground up. Praise for Design Like You Give a Damn [2]: 1--StartFragment-- " The resourcefulness of the projects in the book is inspiring, its information practical (see Stohr ' s chapter on financing sustainable community development) and its numerous factoids sobering. " —TMagazine.blogs.NYTimes.com

The International Building Exhibition 1984/87 in Berlin constitutes one of the most remarkable examples to discuss "open architecture". Almost 10,000 dwellings were constructed or restored in the Kreuzberg districts adjacent to the Berlin Wall, inhabited about halfway by immigrants. The renowned author Esra Akgan, related in many ways to Turkey, Berlin and the USA, narrates the history and reverberations of this architectural-political event.

Flexible housing is housing that can adjust to the changing needs of the user and accommodate new technologies as they emerge. Flexible Housing by Jeremy Till and Tatjana Schneider examines the past, present and future of this important subject through over 160 international examples. Specially commissioned plans, printed to scale, together with over 200 illustrations and diagrams provide fascinating detail and allow direct visual comparisons to be made. Combining history, theory and design the book explains the social and economic benefits that can be achieved and shows the various ways it has been and can be delivered. The book ends with an accessible guide to how flexible housing might be designed and constructed today to achieve adaptable and ultimately sustainable buildings. Housing designers, housing managers and students of architecture, construction and housing will find this book of immense value both as a comprehensive reference and design manual.
