After you find an interesting API and read documentation, you have to send a request – one single task for the server (receiving side). Metaphorically, it ' s like a conversation between two people: Someone (you) asks a question (request), and the interlocutor (endpoint) answers (response). [Types of API Requests](#)

What is API Documentation? API documentation is a technical content deliverable, containing instructions about how to effectively use and integrate with an API. It ' s a concise reference manual containing all the information required to work with the API, with details about the functions, classes, return types, arguments and more, supported by tutorials and examples. API Documentation has traditionally been done using regular content creation and maintenance tools and text editors.

Javadoc is a documentation generator created by Sun Microsystems for the Java language for generating API documentation in HTML format from Java source code. The HTML format is used for adding the convenience of being able to hyperlink related documents together. The "doc comments" format used by Javadoc is the de facto industry standard for documenting Java classes. Some IDEs, like IntelliJ IDEA, NetBeans and Eclipse, automatically generate Javadoc HTML. Many file editors assist the user in pro
