Foreword: Most business managers understand the moral, legal, and financial reasons for maintaining safe and healthy workforces. As business professionals, they embrace the positive effect safety can have on their bottom-line operating performance and value the roles of occupational safety and health (S & H) professionals in striving to support safe operations. Management's decisions to move forward on improving workplace safety and health are dependent on the hazard evaluations and analyses conducted by S & H professionals. Therefore, business managers have a strong interest in supporting the work of S & H professionals. As part of the S & H professional's job, it is important to provide quantitative analyses that make good business sense when recommending necessary interventions to management. To be effective, the safety professional must be able to assess the workplace situation and compare findings with acceptable standards. If the situation poses an unacceptable risk, intervention is necessary to eliminate or control the identified hazard. Data collection, analysis, and evaluation are essential for determining sound, defensible recommendations to support management interventions. This text develops this important process and provides the tools and techniques necessary to make the business case for safety and health interventions in today's workplace through data-supported approaches. Further, the text provides examples for communicating the business case to both employees and management personnel responsible for bringing about needed change.

The book includes self-assessment exercises throughout to help students explore and reflect on their understanding and a clear distinction is made between a) knowledge and concepts that all students should ensure they understand and b) those that can be pursued by students who wish to do so. The authors incorporate a program of practical exercises in SPSS using a prepared data set that helps to consolidate the theory and develop skills and confidence in data handling, analysis and interpretation.
