This guideline covers recognising, diagnosing and managing attention deficit hyperactivity disorder (ADHD) in children, young people and adults. It aims to improve recognition and diagnosis, as well as the quality of care and support for people with ADHD. In September 2019, we amended the recommendation on assessment for people starting medication for ADHD to indicate that an ECG is not needed before starting stimulants, atomoxetine or guanfacine if cardiovascular history and examination are ...

Overview | Attention deficit hyperactivity disorder ... - NICE

Attention deficit hyperactivity disorder (ADHD) is a behavioural syndrome characterized by hyperactivity, impulsivity, and inattention. ADHD should be suspected if the core symptoms of hyperactivity, inattention, and/or impulsivity have been present since childhood. These core symptoms are age-inappropriate and result in significant psychological, social, and/or educational functional impairment.
