One trend over recent years is the rise of APIs as an everyday part of the average server-side developers job. Back in 2009 Phil released a CodeIgniter Rest Server , wrote a few articles about how to use it and built handfuls of APIs for his freelance clients.

Build APIs You Won't Hate - Leanpub
"Build APIs You Won't Hate" on LeanPub Some chapters are just theory, and some chapters will have sections that rely on sample code. I have tried to avoid making this a book of code, and it's intended to be language agnostic, but a book without any concrete examples would just be a hand-wavey joke.

Build APIs You Won't Hate throws away all the academic nonsense and instead focuses on the real-world usefulness of API development. It emphasises a pragmatic and honest approach to solving API problems for modern applications. Phil's comedic attitude to the subject emphasises this whilst still being serious and very useful. It's a delight to read.

API development is becoming increasingly common for server-side developers thanks to the rise of front-end JavaScript frameworks, iPhone applications, and API-centric architectures. It might seem like grabbing stuff from a data source and shoving it out as JSON would be easy, but surviving changes in business logic, database schema updates, new features, or deprecated endpoints can be a nightmare.
