Bulk metallic glasses (BMGs), which are non-crystalline metallic alloys, can be fabricated with low cooling rates in many alloy systems. So, it is possible to produce BMGs that are several centimeters thick. BMGs exhibit useful engineering properties of high mechanical strength

The structure of metallic glass is very different from that of conventional metals. Rather than arranging themselves into repeating patterns of grains, the atoms of metallic glasses are "frozen" in a random, disordered structure, similar to regular window glass. It even has a smooth surface

Overview

What Is Bulk Metallic Glass? -

Streetdirectory.com

An amorphous metal (also known as metallic glass or glassy metal) is a solid metallic material, usually an alloy, with a disordered atomic-scale structure. Most metals are crystalline

Read Online Bulk Metallic

in their solid state, which means they have a highly ordered arrangement of atoms. Amorphous metals are non-crystalline, and have a glass-like structure.

Metallic Glasses: An Overview ...

Metallic glasses or amorphous metals are novel engineering alloys in which the structure is not crystalline (as it is in most metals) but rather is disordered, with the atoms occupying more-or-less random positions in the structure.
