Constraints are a very  
important feature in a  
relational model. In fact,  
the relational model  
supports the well-defined  
theory of constraints on  
attributes or tables.

Constraints are useful  
because they allow a  
designer to specify the  
semantics of data in the  
database.

### 9 Types of Design

#### Constraint. Design

constraints are limitations on a design. These include imposed limitations that you don't control and limitations that are self-imposed as a way to improve a design. The following are common types of design constraint.
