Once you've found all the words, read the uncircled letters from left to right, and top to bottom, to spell out a fascinating fact, riddle response, or interesting observation.

Biomolecular/DNA computing is now well established as an interdisciplinary field where chemistry, computer science, molecular biology, physics, and mathematics come together with the common purpose of fundamental scientific understanding of biology and chemistry and its applications. This international meeting has been the premier forum where scientists with different backgrounds and a common focus meet to present their latest results and entertain visions of the future. In this tradition, about 100 participants converged in Memphis, Tennessee to hold the 13th International Meeting on DNA Computing during June 4–8, 2007, under the auspices of the International Society for Nanoscale Science, Computation and Engineering (ISNSCE) and The University of Memphis. The call for papers encouraged submissions of original, recent, and promising experimental and theoretical results in the field. The Call for Papers elicited some 62 submissions, almost perfectly balanced among the major theoretical and experimental categories. It is evidence of how well the interdisciplinary nature of the conference has truly matured that the major criterion of quality, agreed upon in advance by the Program Committee (PC), produced a nearly balanced program as well across the two major categories, full papers and talks with an abstract only. The program with the greatest perceived impact consisted of 24 papers for plenary oral talks; in addition, 15 full-paper posters and 10 poster abstracts were accepted, of which 5 authors were invited to give five short demos in a new submission category this year. The conference program retained the structure now customary for this meeting.

Nearly 200 word searches are packed with interesting tidbits about every state and the District of Columbia as well as the life and times of the Presidents and First Ladies, from George and Martha Washington to Donald and Melania Trump. Solutions.

This is a reproducible book of 100 word search puzzles. Each puzzle is based on a theme. Each puzzle has at least 40 words to be found. After all the words have been found, the puzzle has not been completed entirely. As a bonus, the remaining extra letters on the grid can be arranged, in the order they are found on the grid, to make a sentence relevant to the topic. The puzzles can be used alone or with other thematically linked

materials.
