A "text revision" of DSM-IV, known as DSM-IV-TR, was published in 2000. The diagnostic categories and the vast majority of the specific criteria for diagnosis were unchanged. The text sections giving extra information on each diagnosis were updated, as were some of the diagnostic codes, to maintain consistency with the ICD. The DSM-IV-TR was organized into a five-part axial system.

An updated version, called the DSM-IV-TR, was published in 2000. This version utilized a multiaxial or multidimensional approach for diagnosing mental disorders. The multiaxial approach was intended to help clinicians and psychiatrists make comprehensive evaluations of a client's level of functioning because mental illnesses often impact many different life areas.

Diagnostic criteria for intellectual disability (intellectual developmental disorder) emphasize the need for an assessment of both cognitive capacity (IQ) and adaptive functioning. Severity is determined by adaptive functioning rather than IQ score. The term mental retardation was used in DSM-IV. However,
