The study of how the environment, local geography, and physical locations influence crime has a long history that stretches across many research traditions. These include the neighborhood effects approach developed in the 1920s, the criminology of place, and a newer approach that attends to the perception of crime in communities. Aided by new technologies and improved data-reporting in recent decades, research in environmental criminology has developed rapidly within each of these approaches. Yet research in the subfield remains fragmented and competing theories are rarely examined together. The Oxford Handbook of Environmental Criminology takes a unique approach and synthesizes the contributions of existing methods to better integrate the subfield as a whole. Gerben J.N. Bruinsma and Shane D. Johnson have assembled a cast of top scholars to provide an in-depth source for understanding how and why physical setting can influence the emergence of crime, affect the environment, and impact individual or group behavior. The contributors address how changes in the environment, global connectivity, and technology provide more criminal opportunities and new ways of committing old crimes. They also explore how crimes committed in countries with distinct cultural practices like China and West Africa might lead to different spatial patterns of crime. This is a state-of-the-art compendium on environmental criminology that reflects the diverse research and theory developed across the western world.

In recent years, the fields of crime analysis and environmental criminology have grown in prominence for their advancements made in understanding crime. This book offers a theoretical and methodological introduction to crime analysis, covering the main techniques used in the analysis of crime and the foundation of crime mapping. Coverage includes discussions of: The development of crime analysis and the profession of the crime analyst, The theoretical roots of crime analysis in environmental criminology, Pertinent statistical methods for crime analysis, Spatio-temporal applications of crime analysis, Crime mapping and the intersection of crime analysis and police work, Future directions for crime analysis. Packed with case studies and including examples of specific problems faced by crime analysts, this book offers

the perfect introduction to the analysis and investigation of crime. It is essential reading for students taking courses on crime analysis, crime mapping, crime prevention, and environmental criminology. A companion website offers further resources for students, including flashcards and video and website links. For instructors, it includes chapter-by-chapter PowerPoint slides.

Samuel Walker's *SENSE AND NONSENSE ABOUT CRIME, DRUGS, AND COMMUNITIES* was one of the first books to challenge common misconceptions about crime, and the new Eighth Edition remains uniquely effective at doing so. Described as a masterful critique of American policies on everything from crime control, to guns, to drugs, this incisive text cuts through popular myths and political rhetoric to confront both conservative and liberal propositions in the context of current research and proven practice. The result is a lucid, research-based work that stimulates critical thinking and enlivens class discussions. This engaging text captures the full complexity of the administration of justice while providing students with a clear sense of its key principles and general patterns. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

The field of environmental criminology is a staple theoretical framework in contemporary criminological theory. With this book, Martin Andresen presents the first comprehensive and sole-authored textbook on this influential and compelling school of criminological thought. He covers a wide range of topics, including: the origins of environmental criminology; the primary theoretical frameworks, such as routine activity theory, geometric theory of crime, rational choice theory, and the pattern theory of crime; the practical application of environmental criminology; an examination of how theories are operationalized and tested; policy implications for the practice of crime prevention. As well as these "popular topics", Andresen also discusses also a number of topics that are at the leading edge of research within environmental criminology. This text will be ideal for courses on crime prevention, where students are often encouraged to consider policy problems and apply theory to practice. This book offers up environmental criminology as a theoretical framework for making sense of complex neighbourhood problems, meaning that it will be perfect for modules on geography of crime, crime analysis and indeed, environmental criminology. It would also be a good supplement for courses on criminological theory.
