Married at First Sight: Six Months Later - EW.com

This book argues that there is no way to make progress in building a sustainable future without extensive participation of non-state actors. The volume explores the contribution of non-state actors to a sustainable transition, starting with citizens and communities of different kinds and ending with cities and city-networks. The authors analyse social, cultural, political and economic drivers and barriers for this transition, from individual behaviour to structural restraints, and investigate interplay between the two. Through a series of wide-ranging case studies from the UK, Australia, Germany, Italy and Denmark, and a number of comparative case studies, the volume provides an empirically and theoretically robust argument that highlights the need to develop, widen and scale up collective action and community-based engagement if the transition to sustainability is to be successful. This book will be of great interest to students and scholars of climate change, sustainability and environmental policy.

Given the growing urgency to develop global responses to a changing climate, The Carbon Fix examines the social and equity dimensions of putting the world's forests—and, necessarily, the rural people who manage and depend on them—at the center of climate policy efforts such as REDD+, intended to slow global warming. The book assesses the implications of international policy approaches that focus on forests as carbon and especially, forest carbon offsets, for rights, justice, and climate governance. Contributions from leading anthropologists and geographers analyze a growing trend towards market principles and financialization of nature in environmental governance, placing it into conceptual, critical, and historical context. The book then challenges perceptions of forest carbon initiatives through in-depth, field-based case studies assessing projects, policies, and procedures at various scales, from informed consent to international carbon auditing. While providing a mixed assessment of the potential for forest carbon initiatives to balance carbon with social goals, the authors present compelling evidence for the complexities of the carbon offset enterprise, fraught with competing interests and interpretations at multiple scales, and having unanticipated and often deleterious effects on the resources and rights of the world's poorest peoples—especially indigenous and rural peoples. The Carbon Fix provides nuanced insights into political, economic, and ethical issues associated with climate change policy. Its case approach and fresh perspective are critical to environmental professionals, development planners, and project managers; and to students in upper level undergraduate and graduate courses in environmental anthropology and geography, environmental and policy studies, international development, and indigenous studies.

This book offers a unique and focused study of the use of ultrasound during the first trimester, a critical time in a fetus' development. It includes basic examination guidelines as well as cutting-edge ultrasound modalities, including Doppler and three-dimensional ultrasound, for the period immediately preceding conception through early embryology. Beginning with a discussion of the safety and efficacy of diagnostic ultrasound and the use of this modality for the evaluation and treatment of infertility, recognized experts in the field explore conditions that may interfere with normal conception or development, including maternal diseases that would benefit from early scanning, elements of teratology, multiple gestations, ectopic pregnancy, gestational trophoblastic disease, fetal anomalies and invasive procedures in the first trimester. Numerous illustrations and figures are provided to serve as aids for understanding key concepts. First-Trimester Ultrasound is a valuable resource for many, in or after training, in obstetrics and gynecology, radiology, emergency medicine, family medicine and genetics.

From 1962 to 1971, the U.S. military sprayed herbicides over Vietnam to strip the thick jungle canopy that could conceal opposition forces, to destroy crops that those forces might depend on, and to clear tall grasses and bushes from the perimeters of US base camps and outlying fire-support bases. Mixtures of 2,4-dichlorophenoxyacetic acid (2,4-D), 2,4,5-trichlorophenoxyacetic acid (2,4,5-T), picloram, and cacodylic acid made up the bulk of the herbicides sprayed. The main chemical mixture sprayed was Agent Orange, a 50:50 mixture of 2,4-D and 2,4,5-T. At the time of the spraying, 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD), the most toxic form of dioxin, was an unintended contaminant generated during the production of 2,4,5-T and so was present in Agent Orange and some other formulations sprayed in Vietnam. Because of complaints from returning Vietnam veterans about their own health and that of their children combined with emerging toxicologic evidence of adverse effects of phenoxy herbicides and TCDD, the National Academies of Sciences, Engineering, and Medicine was asked to perform a comprehensive evaluation of scientific and medical information regarding the health effects of exposure to Agent Orange, other herbicides used in Vietnam, and the various components of those herbicides, including TCDD. Updated evaluations were conducted every two years to review newly available literature and draw conclusions from the overall evidence. Veterans and Agent Orange: Update 11 (2018) examines peer-reviewed scientific reports concerning associations between various health outcomes and exposure to TCDD and other chemicals in the herbicides used in Vietnam that were published between September 30, 2014, and December 31, 2017, and integrates this information with the previously established evidence database.

We present estimates of welfare by country for 2007 and 2014 using the methodology of Jones and Klenow (2016) which incorporates consumption, leisure, mortality and inequality, and we extend the methodology to include environmental externalities. During the period of the global financial crisis welfare grew slightly more rapidly than income per capita, mainly due to improvements in life expectancy. This led to welfare convergence in most regions towards advanced country levels. Introducing environmental effects changes the welfare ranking for countries that rely heavily on natural resources, highlighting the importance of the natural resource base in welfare. This methodology could provide a theoretically consistent and tractable way of monitoring progress in several Sustainable Development Goal (SDG) indicators.

If you're serious about exam success, it's time to Concentrate! Company Law Concentrate is the essential study and revision guide for law students looking for extra marks. The clear, succinct coverage enables you to quickly grasp the fundamental principles of this area of law and helps you to succeed in exams. This guide has been rigorously reviewed and is endorsed by students and lecturers for level of coverage, accuracy, and exam advice. Online Resource Centre: Packed with essential information, key cases, revision tips, exam Q&As, and more, Company Law Concentrate is also supported by extensive online resources to take your learning further (www.oup.com/lawrevision):
\* Pinpoint which areas you need to concentrate on with the diagnostic test\* Test your knowledge with the multiple choice questions and receive feedback on your answers\* Improve your essay skills using the outline answers for guidance on what to include and how to structure your answer\* Revise the facts and principles of key cases using the interactive flashcards\* Learn the important terms and definitions using the interactive glossary\* Explore the subject in more depth with extensive further reading recommendations\* Achieve better marks following the advice on revision and exam technique by experienced examiner Nigel Foster\* View the latest developments in the law from the author's Twitter feed

The concept of community, in all its diverse definitions and manifestations, provides a unique approach to learn more about how groups of individuals and organizations are addressing the challenges posed by climate change. This new volume highlights specific cases of communities developing innovative approaches to climate mitigation and adaptation around the United States. Defining community more comprehensively than just spatial geography to include also communities of interest, identity and practice, this book highlights how individuals and organizations are addressing the challenges posed by climate change through more resilient social processes, government policies and sustainable practices. Through close examinations of community efforts across the United States, including agricultural stakeholder engagement and permaculture projects, coastal communities and prolonged drought areas, and university extension and local governments, this book shows the influence of building individual and institutional capacity toward addressing climate change issues at the community level. It will be useful to community development students, scholars and practitioners learning to respond to unexpected shocks and address chronic stress associated with climate change and its impacts.

Several years after the Arab Spring began, democracy remains elusive in the Middle East. While Tunisia has made progress towards democracy, other countries that overthrew their rulers - Egypt, Yemen, and Libya - remain in authoritarianism and instability. This volume provides a foundational exploration of the Arab Spring's successes and failures.

An essential foundation text for residents and pathologists, the third edition of Head and Neck Pathology, a volume in the Foundations in Diagnostic Pathology series, has been fully revised to include recent advances in the field. Featuring a highly templated, easy-to-use format and new information throughout, this practical, affordable resource by Drs. Lester D. R. Thompson and Justin A. Bishop is ideal for study and review as well as everyday clinical practice. Inclusion of a wide range of diagnoses in both head and neck and endocrine organ pathology. A focus on the specific features of selected non-neoplastic and neoplastic entities, including broad and in-depth differential diagnoses. Clinical and Pathologic Features summarized in quick-reference boxes for fast access to information. A highly templated format that includes pertinent clinical, imaging, and management prognostic features; pathologic features; ancillary studies; differential diagnosis; and meaningfully chosen bibliography. Over a thousand full-color photographs illustrate important pathologic features, enabling you to form a differential diagnosis and compare your findings with actual cases. Contributions from internationally recognized expert pathologists, keeping you up to date with the latest information in the field. New criteria as established by the 2017 World Health Organization Classification of Head and Neck Tumours and the 2017 World Health Organization Classification of Endocrine Organ Tumours. A new oropharynx section, separated from the oral cavity. Inclusion of unique newly identified molecular information in many tumor entities. Coverage of NUT carcinoma, HPV-associated adenoid cystic-like carcinoma, sinonasal renal cell-like adenocarcinoma, SMARCB1 (INI-1) deficient sinonasal carcinoma, biphenotypic sinonasal sarcoma, neuroendocrine carcinomas, oropharyngeal carcinoma, polycystic disease and sclerosing polycystic adenosis, secretory carcinoma, cribriform adenocarcinoma of the minor salivary glands, variants of myoepithelioma, clear cell carcinoma, and changes in gnathic cysts classification.
