This book is a printed edition of the Special Issue "UAV-Based Remote Sensing" that was published in Sensors

This book gathers more than 150 peer-reviewed papers presented at the 5th INTBAU International Annual Event, held in Milan, Italy, in July 2017. The book

represents an invaluable and up-to-date international exchange of research, case studies and best practice to confront the challenges of designing places, building cultural landscapes and enabling the development of communities. The papers investigate methodologies of representation, communication and

valorization of historic urban landscapes and cultural heritage, monitoring conservation management, cultural issues in heritage assessment, placemaking and local identity enhancement, as well as reconstruction of settlements affected by disasters. With contributions from leading experts, including university researchers,

professionals and policy makers, the book addresses all who seek to understand and address the challenges faced in the protection and enhancement of the heritage that has been created.

This book describes the results of a four-year research programme of

archaeological works (2010-3), at the later prehistoric enclosure of White Castle, East Lothian. The excavations demonstrated a clear sequence of enclosure development over time, whereby the design and visual impact often appeared to be more important than defence alone.

In AD 42, the Emperor Claudius initiated work on the construction of a new artificial harbour a short distance to the north of the mouth of the Tiber. The harbour facilities were enlarged at the instigation of the Emperor Trajan at the beginning of the second century AD, and Portus remained the principal port for the

City of Rome into the Byzantine period. The surviving archaeological remains and comments by ancient sources make it clear that Portus lay at the heart of Rome's maritime façade. As well as being a key Mediterranean centre for passengers and for the loading, unloading, transshipment and storage of products from across the

Empire, it was also designed to make an ideological statement about the supremacy of Rome in the world. Portus is, thus, of key importance to understanding Rome and her relationship to the Empire. The project that forms the subject of this book was designed to use non-destructive techniques of topographic and geophysical

survey in combination with systematic surface collection to provide a new understanding of the plan of Portus. The work was undertaken between 1997 and 2002 as a collaboration between the Soprintendenza per i Beni Archeologici di Ostia, the British School at Rome, and the Universities of Southampton, Durham and

Cambridge. This volume presents the full results of the survey and uses them as the basis for a re-evaluation of the whole port complex. The geophysical survey results are interpreted in the context of earlier work at the site in order to offer new perspectives on the character and development of the site.

The field of groundwater hydrology and the discipline of hydrogeology have attracted a lot of attention during the past few decades. This is mainly because of the increasing need for high quality water,

Download Free Leica Total Station 805

especially groundwater. This book, written by 15 scientists from 6 countries, clearly demonstrates the extensive range of issues that are dealt with in the field of hydrogeology. Karst hydrogeology and deposition processes, hydrogeochemistry, soil hydraulic properties as a factor affecting groundwater recharge processes,

Download Free Leica Total Station 805

relevant conceptual models, and geophysical exploration for groundwater are all discussed in this book, giving the reader a global perspective on what hydrogeologists and co-scientists are currently working on to better manage groundwater resources. Graduate students, as well as practitioners, will find this book
