LIMDEP is best suited to the analysis of cross sections, panels, and relatively standard problems of time series analysis. In addition, has provided many recent LIMDEP innovations in econometrics, including cutting edge techniques in panel data analysis, frontier and efficiency estimation and discrete choice modeling.

How and why does Denmark have one of the richest, most equal, and happiest societies in the world today? Historians have often pointed to developments from the late nineteenth century, when small peasant farmers worked together through agricultural cooperatives, whose exports of butter and bacon rapidly gained a strong foothold on the British market. This book presents a radical retelling of this story, placing (largely German-speaking) landed elites—rather than the Danish peasantry—at center stage. After acquiring estates in Denmark, these elites imported and adapted new practices from outside the kingdom, thus embarking on an ambitious program of agricultural reform and sparking a chain of events that eventually led to the emergence of Denmark 's famous peasant cooperatives in 1882. A Land of Milk and Butter presents a new interpretation of the origin of these cooperatives with striking implications for developing countries today.

This paper analyses how the relationship between decent rural employment and agricultural productivity vary across production systems. The focus is on sub-Saharan Africa, taking Ethiopia and Tanzania as case studies. A latent class stochastic frontier approach is applied to identify different production systems and technologies for a sample of farms in the two countries. Subsequently, we estimate the efficiency of production for these systems and investigate in how far decent rural employment indicators explain different levels of efficiencies across different latent classes.

This proceedings volume examines the state-of-the-art of productivity and efficiency analysis and adds to the existing research by bringing together a selection of the best papers from the 8th North American Productivity Workshop (NAPW). It also aims to analyze world-wide perspectives on challenges that local economies and institutions may face when changes in productivity are observed. The volume comprises of seventeen papers that deal with productivity measurement, productivity growth, dynamics of productivity change, measures of labor productivity, measures of technical efficiency in different sectors, frontier analysis, measures of performance, industry instability and spillover effects. These papers are relevant to academia, but also to public and private sectors in terms of the challenges firms, financial institutions, governments and individuals may face when dealing with economic and education related activities that lead to increase or decrease of productivity. The North American Productivity Workshop brings together academic scholars and practitioners in the field of productivity and efficiency analysis from all over the world. It is a four day conference exploring topics related to productivity, production theory and efficiency measurement in economics, management science, operations research, public administration, and related fields. The papers in this volume also address general topics as health, energy, finance, agriculture, utilities, and economic dev elopment, among others. The editors are comprised of the 2014 local organizers, program committee members, and celebrated guest conference speakers.

Following the seminal Palgrave Handbook of Econometrics: Volume 1, this second volume brings together the finest academics working in econometrics today and explores applied econometrics, containing contributions on subjects including growth/development econometrics and applied econometrics and computing.

This volume discusses pleasurable design — a part of the traditional usability design and evaluation methodologies. The book emphasizes the importance of designing products and services to maximize user satisfaction. By combining this with traditional usability methods it increases the appeal of products and use of services.

The second edition of this popular book brings students fully up to date with the latest methods and techniques in choice analysis. Comprehensive yet accessible, it offers a unique introduction to anyone interested in understanding how to model and forecast the range of choices made by individuals and groups. In addition to a complete rewrite of several chapters, new topics covered include ordered choice, scaled MNL, generalised mixed logit, latent class models, group decision making, heuristics and attribute processing strategies, expected utility theory, and prospect theoretic applications. Many additional case studies are used to illustrate the applications of choice analysis with extensive command syntax provided for all NLOGIT applications and datasets available online. With its unique blend of theory, estimation and application, this book has broad appeal to all those interested in choice modelling methods and will be a valuable resource for students as well as researchers, professionals and consultants.

A substantial enhancement of the only text devoted entirely to the negative binomial model and its many variations.

It is increasingly common for analysts to seek out the opinions of individuals and organizations using attitudinal scales such as degree of satisfaction or importance attached to an issue. Examples include levels of obesity, seriousness of a health condition, attitudes towards service levels, opinions on products, voting intentions, and the degree of clarity of contracts. Ordered choice models provide a relevant methodology for capturing the sources of influence that explain the choice made amongst a set of ordered alternatives. The methods have evolved to a level of sophistication that can allow for heterogeneity in the threshold parameters, in the explanatory variables (through random parameters), and in the decomposition of the residual variance. This book brings together contributions in ordered choice modeling from a number of disciplines, synthesizing developments over the last fifty years, and suggests useful extensions to account for the wide range of sources of influence on choice.

Edwin Mansfield was a research pioneer into the economics of R and D and technological change. As appreciation and remembrance for his scholarly contributions, eminent scholars have contributed original papers for this edited volume. The authors have followed the "Mansfieldian " approach of emphasizing economic insight and intuition over mathematical rigor and as a result are very accessible. Essays in Honor of Edwin Mansfield has the potential to serve as a reader in all advanced undergraduate and graduate classes/seminars in the economics of R and D and technological change. This edited volume will be the definitive work in the field.
