This volume draws together research and practice from the fields of literacy education and inclusion. It provides an insight into current theory, research and issues associated with teaching literacy to all students in inclusive classrooms. Literacy remains a critical success factor for students, as the basis for concurrent and future learning.

What's Worth Learning? addresses the central question of general education. For learners facing a complex, unpredictable, and dangerous future, it asks and answers the question: What knowledge is absolutely essential for every learner? In simple, jargon-free language, the book explains why the "core curriculum" in near-universal use in America's classrooms was poor when it was adopted in 1893 and why it grows more dysfunctional with each passing year. It then shows how, without changes in staffing, budgets, or bureaucratic boundaries, knowledge can be organized to both radically improve learner intellectual performance and significantly decrease the cost of a general education. Recognizing the difficulty of translating a new idea into classroom instruction, an appendix offers a comprehensive, classroom-tested course of study suitable for adolescents and older students.

Curriculum Leadership: Strategies for Development and Implementation, Third Edition is a

one-of-a-kind resource written for educational leaders, teachers, and administrators. Responding to the need for globally connected classrooms and innovative leadership, this unique text provides a rich and inclusive foundation of curriculum. The authors draw upon a wide range of research and experience to provide readers with creative, up-to-date curriculum strategies and ideas. In sharing innovative programs, learning experiences, and new approaches, they build a solid connection for curriculum development from theory to practice, helping future leaders in education meet the global challenges of our time.

The ideal resource for researchers, theoreticians, and practitioners of curriculum; a ready reference for teachers, supervisors, and administrators who participate in curriculum making; and a widely popular text for courses in curriculum planning, development, implementation, and evaluation, this book presents a comprehensive, thoroughly documented, balanced overview of the foundations, principles, and issues of curriculum today. The information presented encourages readers to consider choices and then formulate their own views on curriculum.

Exploring the ways in which today's Internet-savvy young people view and use information to complete school assignments and make sense of everyday life, this new edition provides a review of the literature since 2010. The development of information literacy skills instruction can be traced from its basis in traditional reference services to its current growth as an instructional imperative for school librarians. Reviewing the scholarly research that supports best practices in the 21st century school library, this book contains insights into improving

instruction across content areas—drawn from the scholarly literatures of library and information studies, education, communication, psychology, and sociology—that will be useful to school, academic, and public librarians and LIS students. In this updated fourth edition, special attention is given to recent studies of information seeking in changing instructional environments made possible by the Internet and new technologies. This new edition also includes new chapters on everyday information seeking, motivation, and a much-expanded chapter on Web 2.0. The new AASL standards are included and explored in the discussion. This book will appeal to LIS professors and students in school librarianship programs as well as to practicing school librarians. Offers information literacy research and applications to instruction useful to all types of libraries Expands on previous editions of a textbook widely adopted by school library preparation programs Discusses the newest AASL standards as they relate to information literacy and instruction

Visual Research: A Concise Introduction to Thinking Visually is the first text to present a concise overview of the significant ethical, theoretical, and practical considerations for conducting research with images. The capacity to take photos and video on handheld devices and the ability to store, post, and share such imagery online all offer tremendous opportunities for social research. The rapid development and popularity of such technology means that little technological proficiency is required, and even less theoretical and ethical consideration. This book provides an accessible introduction to doing visual research in the

social sciences. Beginning with ethical considerations, this book highlights the importance of thinking visually before engaging in visual research. Further themes involve creating, organizing, and using images and are presented so as to help readers think about and work with their own visual data. Boxed case studies and further reading suggestions enhance the utility of this primer. Concise and highly focused, *Visual Research* will be an invaluable resource for visual, media, and communications students and researchers and others interested in visual research in the social sciences.

In his daring and ground-breaking work, Brady argues that the most satisfactory way to make the general education curriculum a coherent whole is not by bridging between the parts but by recognizing them as integral, logically-related components of larger entities. These "larger entities" are socio-cultural systems. When considering what's worth teaching, administrators and faculty typically have faced issues such as these: For decades we have been in the center of an information explosion. How can we decide what new information to teach, and what old information to exclude to make room for the new? Vast domains of knowledge lie neglected outside the traditional disciplines and subjects. How can these domains be identified, and their relative importance determined? Learning theorists insist that learners must make new knowledge part of a logically-integrated conceptual framework. How can educators help students construct these frameworks? Certain ideas are so powerful they should be introduced early and elaborated year after year. What are these

ideas? Until now questions such as these had no answers. But *What's Worth Teaching?* does suggest answers. In clear and thoughtfully crafted language, Brady lays a theoretical foundation for a general education curriculum surpassing in comprehensiveness and coherence anything now offered in America's schools and universities.

This volume draws together research and practice from the fields of literacy education and inclusion. It provides an insight into current theory, research and issues associated with teaching literacy to all students in inclusive classrooms.
