"Since Mayor de Blasio launched the Housing New York Plan in 2014, New York City has accelerated the construction and preservation of affordable housing to levels not seen in 30 years. We are on track to secure more affordable housing in the first four years of the Administration than in any comparable period since 1978. The City has tripled the share of affordable housing for households earning less than \$25,000. Funding for housing construction and preservation has doubled, as have the number of homes in the City ' s affordable housing lotteries each year. Hundreds of once-vacant lots have affordable homes rising on them today. Reforms to zoning and tax programs are not just incentivizing, but mandating affordable apartments—paid for by the private sector— in new development." --Page 4.

Independent legal professionals play a key role in the administration of justice and the protection of human rights. Judges, prosecutors and lawyers need access to information on human rights standards laid down in the main international legal instruments and to related jurisprudence developed by universal and regional monitoring bodies. This publication, which includes a manual and a facilitator's guide, seeks to provide a comprehensive core

curriculum on international human rights standards for legal professionals. It includes a CD-ROM containing the full electronic text of the manual in pdf format.

Infectious disease surveillance has evolved at an extraordinary pace during the past several decades, and continues to do so. It is increasingly used to inform public health practice in addition to its use as a tool for early detection of epidemics. It is therefore crucial that students of public health and epidemiology have a sound understanding of the concepts and principles that underpin modern surveillance of infectious disease. Written by leaders in the field, who have vast hands – on experience in conducting surveillance and teaching applied public health, *Concepts and Methods in Infectious Disease Surveillance* is comprised of four sections. The first section provides an overview, a description of systems used by public health jurisdictions in the United States and legal considerations for surveillance. The second section presents chapters on major program – area or disease – specific surveillance systems, including those that monitor bacterial infections, foodborne diseases, healthcare – associated infections, and HIV/AIDS. The following section is devoted to methods for conducting surveillance and also approaches for data analysis. A concluding section summarizes communication of surveillance findings, including the use of traditional and social media, in addition to showcasing lessons learned from the New York City Department of Health ' s experience in surveillance and epidemiology training. This comprehensive new book covers major topics at an introductory to intermediate level, and will be an excellent resource for instructors. Suitable for use in graduate level courses in public health, human and veterinary medicine, and in undergraduate programs in public – health – oriented disciplines, *Concepts and Methods in Infectious Disease Surveillance* is also a useful primer for frontline public health practitioners, hospital epidemiologists, infection control practitioners, laboratorians in public health settings, infectious disease researchers, and medical and public health informaticians interested in a concise overview of infectious disease surveillance.

MAP Testing Grades: 6-8 Vol - 2

The Routledge Handbook of Anthropology and the City provides a comprehensive study of current and future urban issues on a global and local scale. Premised on an ‘ engaged ’ approach to urban anthropology, the volume adopts a thematic approach that covers a wide range of modern urban issues, with a particular focus on those of high public interest. Topics covered include security, displacement, social justice, privatisation, sustainability, and preservation. Offering valuable insight into how anthropologists investigate, make sense of, and then address a variety of urban issues, each chapter covers key theoretical and methodological concerns alongside rich ethnographic case study material. The volume is an essential reference for students and researchers in urban anthropology, as well as of interest for those in related disciplines, such as urban studies, sociology, and geography.

In January 2007, New York City Police Commissioner Raymond Kelly asked the RAND Corporation to assess whether his department was doing everything it could to minimize the unnecessary discharge of firearms. In particular, he asked RAND to examine the quality and completeness of the New York City Police Department firearm-training program and identify potential improvements in the design and delivery of the curriculum, the technology used, the frequency and duration of training sessions, the tactics and procedures on which the training is based, and the Department's firearm-discharge-review process. This monograph reports the observations, findings, and recommendations of that study.

This volume is a comprehensive and reader-friendly book on hearing and adult hearing loss as well as the many options to facilitate hearing recovery.
