Governance comprises all of the processes of governing – whether undertaken by the government of a state, by a market or by a network – over a social system and whether through the laws, norms, power or language of an organized society. It relates to "the processes of interaction and decision-making among the actors involved in a collective problem that lead to the creation, reinforcement, or reproduction of social norms and institutions". In lay terms, it could be described as the ...

Power and Authority in Internet Governance investigates the hotly contested role of the state in today's digital society. The book asks: Is the state "back" in internet regulation? If so, what forms are state involvement taking, and with what consequences for the future? The volume includes case studies from across the world and addresses a wide range of issues regarding internet infrastructure, data and content. The book pushes the debate beyond a simplistic dichotomy between liberalism and authoritarianism in order to consider also greater state involvement based on values of democracy and human rights. Seeing internet governance as a complex arena where power is contested among diverse non-state and state actors across local, national, regional and global scales, the book offers a critical and nuanced discussion of how the internet is governed – and how it should be governed. Power and Authority in Internet Governance provides an important resource for researchers across international relations, global governance, science and technology studies and law as well as policymakers and analysts concerned with regulating the global internet.

This edited volume examines power in its different dimensions in global governance. Scholars tend to underestimate the importance of power in international relations because of a failure to see its multiple forms. To expand the conceptual aperture, this book presents and employs a taxonomy that alerts scholars to the different kinds of power that are present in world politics. A team of international scholars demonstrate how these different forms connect and intersect in global governance in a range of different issue areas. Bringing together a variety of theoretical perspectives, this volume invites scholars to reconsider their conceptualization of power in world politics and how such a move can enliven and enrich their understanding of global governance.

How can we rethink ideas of policy failure to consider its paradoxes and contradictions as a starting point for more hopeful democratic encounters? Offering a provocative and innovative theorisation of governance as relational politics, the central argument of Power, Politics and the Emotions is that there are sets of affective dynamics which complicate the already materially and symbolically contested terrain of policy-making. This relational politics is Shona Hunter's starting point for a more hopeful, but realistic understanding of the limits and possibilities enacted through contemporary governing processes. Through this idea Hunter prioritises the everyday lived enactments of policy as a means to understand the state as a more differentiated and changeable entity than is often allowed for in current critiques of neoliberalism. But Hunter reminds us that focusing on lived realities demands a melancholic confrontation with pain, and the risks of social and physical death and violence lived through the contemporary neoliberal state. This is a state characterised by the ascendancy of neoliberal whiteness; a state where no one is innocent and we are all responsible for the multiple intersecting exclusionary practices creating its unequal social orderings. The only way to struggle through the central paradox of governance to produce something different is to accept this troubling interdependence between resistance and reproduction and between hope and loss. Analysing the everyday processes of this relational politics through original empirical studies in health, social care and education the book develops an innovative interdisciplinary theoretical synthesis which engages with and extends work in political science, cultural theory, critical race and feminist analysis, critical psychoanalysis and post-material sociology.

The study of global governance has often led separate lives within the respective camps of International Political Economy and Foucauldian Studies. Guzzini and Neumann combine these to look at an increasingly global politics with a growing number of agents,

recognising the emergence of a global polity.

Traditional analyses of global security cannot explain the degree to which there is "governance" of important security issues -- from combatting piracy to curtailing nuclear proliferation to reducing the contributions of extractive industries to violence and conflict. They are even less able to explain why contemporary governance schemes involve the various actors and take the many forms they do. Juxtaposing the insights of scholars writing about new modes of governance with the logic of network theory, *The New Power Politics* offers a framework for understanding contemporary security governance and its variation. The framework rests on a fresh view of power and how it works in global politics. Though power is integral to governance, it is something that emerges from, and depends on, relationships. Thus, power is dynamic; it is something that governors must continually cultivate with a wide range of consequential global players, and how a governor uses power in one situation can have consequences for her future relationships, and thus, future power. Understanding this new power politics is crucial for explaining and shaping the future of global security politics. This stellar group of scholars analyzes both the networking strategies of would-be governors and their impacts on the effectiveness of governance and whether it reflects broad or narrow concerns on a wide range of contemporary governance issues.

As one of the most innovative and influential thinkers in international relations for more than three decades, Robert O. Keohane's groundbreaking work in institutional theory has redefined our understanding of international political economy. Consisting of a selection of his most recent essays, this absorbing book address such core issues as interdependence, institutions, the development of international law, globalization and global governance. The essays are placed in historical and intellectual context by a substantial new introduction outlining the developments in Keohane's thought, and in an original afterword, the author offers a challenging interpretation of the September 11th attacks and their aftermath. Undoubtedly, this book is essential reading for anyone with an interest in international relations.

What price do states pay for becoming and remaining world powers? Why did the first greatly expanded British Empire collapse so rapidly? Nancy F. Koehn here recounts the urgent challenges that confronted the British in the ten-year period following their overwhelming victory in the Seven Years War.

Drawing on Chinese cultural and philosophical traditions, this book offers a ground breaking reinterpretation of world politics from Yaqing Qin, one of China's leading scholars of international relations. Qin has pioneered the study of constructivism in China and developed a variant of this approach, arguing that culture defined in terms of background knowledge nurtures social theory and enables theoretical innovation. Building upon this argument, this book presents the concept of 'relationality', shifting the focus from individual actors to the relations amongst actors. This ontology of relations examines the unfolding processes whereby relations create the identities of actors and provide motivations for their actions. Appealing to scholars of international relations theory, social theory and Chinese political thought, this exciting new concept will be of particular interest to those who are seeking to bridge Eastern and Western approaches for a truly global international relations project.
