Taeniasis, cysticercosis and echinococcosis in Thailand

The main objective of this study was to determine the prevalence of taeniid parasites and the specific detection of *Echinococcus granulosus* using copro-DNA polymerase chain reaction (PCR) analysis in the stray dogs of Kerman, south-eastern Iran. From September 2013 to May 2014, faecal samples of stray dogs were collected from different parts of the city of Kerman and its suburbs.

Cystic echinococcosis (CE) is caused by infection with the larval stage of *Echinococcus granulosus*. CE is found in Africa, Europe, Asia, the Middle East, Central and South America, and in rare cases, North America. The parasite is transmitted to dogs when they ingest the organs of other animals that contain hydatid cysts.
