"Thought provoking and fresh - this book challenges how we think about economics." Gillian Tett, Financial Times For further information about recent publicity events and media coverage for Rethinking Capitalism please visit <http://marianamazucato.com/rethinking-capitalism/> Western capitalism is in crisis. For decades investment has been falling, living standards have stagnated or declined, and inequality has risen dramatically. Economic policy has neither reformed the financial system nor restored stable growth. Climate change meanwhile poses increasing risks to future prosperity. In this book some of the world's leading economists propose new ways of thinking about capitalism. In clear and compelling prose, each chapter shows how today's deep economic problems reflect the inadequacies of orthodox economic theory and the failure of policies informed by it. The chapters examine a range of contemporary economic issues, including fiscal and monetary policy, financial markets and business behaviour, inequality and privatisation, and innovation and environmental change. The authors set out alternative economic approaches which better explain how capitalism works, why it often doesn't, and how it can be made more innovative, inclusive and sustainable. In this book, Kalyan Sanyal reviews the traditional notion of capitalism and propounds an original theory of capitalist development in the post-colonial context. In order to substantiate his theory, concepts such as primitive accumulation, governmentality and post-colonial capitalist formation are discussed in detail. Analyzing critical questions from a third world perspective such as: Will the integration into the global capitalist network bring to the third world new economic opportunities? Will this capitalist network make the third world countries an easy prey for predatory multinational corporations? The end result is a discourse, drawing on Marx and Foucault, which envisages the post-colonial capitalist formation, albeit in an entirely different light, in the era of globalization.

Modern economies reward activities that extract value rather than create it. This must change to ensure a capitalism that works for us all. Shortlisted for the FT & McKinsey Business Book of the Year Award A scathing indictment of our current global financial system, *The Value of Everything* rigorously scrutinizes the way in which economic value has been accounted and reveals how economic theory has failed to clearly delineate the difference between value creation and value extraction. Mariana Mazzucato argues that the increasingly blurry distinction between the two categories has allowed certain actors in the economy to portray themselves as value creators, while in reality they are just moving around existing value or, even worse, destroying it.

The book uses case studies—from Silicon Valley to the financial sector to big pharma—to show how the foggy notions of value create confusion between rents and profits, reward extractors and creators, and distort the measurements of growth and GDP. In the process, innovation suffers and inequality rises. The lesson here is urgent and sobering: to rescue our economy from the next inevitable crisis and to foster long-term economic growth, we will need to rethink capitalism, rethink the role of public policy and the importance of the public sector, and redefine how we measure value in our society.

Examine what would happen if we were to deploy blockchain technology at the sovereign level and use it to create a decentralized cashless economy. This book explains how finance and economics work today, and how the convergence of various technologies related to the financial sector can help us find solutions to problems, such as excessive debt creation, banks getting too big to fail, and shadow banking. The Blockchain Alternative offers sensible corrections to outdated and incorrect dogmas, such as the efficient markets hypothesis and rational expectations theory. You'll also be introduced to universal basic income, the consequences of going cashless, why complexity economics needs to be understood and what kinds of tools and theories you'll need to redefine the existing definition of capitalism. While the book does discuss technologies and methods that are primed for our future, a number of references are made to economic history and the works of great thinkers from a different era. You'll see how the blockchain can be used to deploy solutions

that were devised in the past, but which can serve as the antidote to our current economic malaises. You'll discover that what is required today is not an adaptation of the old theories, but a new methodology that is suited to this new era. Without undertaking such an endeavor, one will always be burdened with a definition of capitalism that is out of kilter with the evolution of our digital humanity. What would this mean to monetary and fiscal policy, market structure and our current understanding of economics? More importantly would we need to change our current understanding of capitalism? And if we were to change our perceptions, what would the future version look like? This book answers these questions, and analyses some of the most pertinent issues of our generation. What You'll Learn Examine fractional banking, debt, and the financialization of assets Gain a firm understanding of the "too big to fail" theory, smart contracts, and Fintech Review economics and agent-based modelling Use the blockchain and complexity economics to rethink economics and capitalistic systems Who This Book Is For The primary audience is bankers and other finance professionals, policy makers, and students of finance and economics. The secondary audience is anyone seeking a deeper understanding of the current financial system, the blockchain, and the future of capitalism. Praise for The Blockchain Alternative "...a bold and pioneering effort to make sense of how emerging digital technologies might be used to reshape public policies, including macroeconomic and social policies, in basic ways. Everyone interested in this very important emerging question should read this book." - Dr. Sanjay G.

Reddy, Associate Professor of Economics at The New School for Social Research and Research Associate of the Initiative for Policy Dialogue at Columbia University. "Writing on blockchain today is analogous to writing about the internet, before it became massively distributed. The book pushes us to think about the quantum leap that this technology may infer to our capitalist model, if scaled at the pace described by the book. Written with the support of strong empirical models but also with an open mind towards the future, this is a must read for anyone interested in becoming part of the new economic infrastructure" - Dr. Mark Esposito, Harvard University's Division of Continuing Education & Judge Business School, University of Cambridge "With a rigorously balanced dosage of versatility and rationale we are allured into a multifaceted trajectory across ingrained yet functionally arcane economic models, only to plunge into a conceptually revolutionary realm which irreversibly stimulates us into envisaging a fascinating novel scheme of world order". - Ioana Surpateanu, Political Adviser to the European Parliament "If there is only one book that I am reading on how blockchain is going to change our lives, it will have to be "The Blockchain Alternative." - Dr. Terence Tse, Associate Professor of Finance, ESCP Europe Business School

Longlisted for the 2021 Porchlight Business Book Awards, Big Ideas & New Perspectives “She offers something both broad and scarce: a compelling new story about how to create a desirable future.”—New York Times An award-winning author and leading international economist delivers a hard-hitting and much needed critique of modern capitalism in which she argues that, to solve the massive crises facing us, we must be innovative—we must use collaborative, mission-oriented thinking while also bringing a stakeholder view of public private partnerships which means not only taking risks together but also sharing the rewards. Capitalism is in crisis. The rich have gotten richer—the 1 percent, those with more than \$1 million, own 44 percent of the world's wealth—while climate change is transforming—and in some cases wiping out—life on the planet. We are plagued by crises threatening our lives, and this situation is unsustainable. But how do we fix these problems decades in the making? Mission Economy looks at the grand challenges facing us in a radically new way. Global warming, pollution, dementia, obesity, gun violence, mobility—these environmental, health, and social dilemmas are huge, complex, and have no simple solutions. Mariana Mazzucato argues we need to think bigger and mobilize our resources in a way that is as bold as inspirational as the moon landing—this time to the most ‘wicked’ social problems of our time.. We can only begin to find answers if we fundamentally restructure capitalism to make it inclusive, sustainable, and driven by innovation that tackles concrete problems from the

digital divide, to health pandemics, to our polluted cities. That means changing government tools and culture, creating new markers of corporate governance, and ensuring that corporations, society, and the government coalesce to share a common goal. We did it to go to the moon. We can do it again to fix our problems and improve the lives of every one of us. We simply can no longer afford not to.

The solution to inequality, environmental degradation, and other deficits of capitalism is better capitalism. The Power of Creative Destruction draws on cutting-edge research to argue that what we need today is not revolution but reform: pro-competitive policies that enable innovation while compensating for the disruption it causes.

What is money, where does it come from, and who controls it? In this accessible, brilliantly argued book, leading political economist Ann Pettifor explains in straightforward terms history's most misunderstood invention: the money system. Pettifor argues that democracies can, and indeed must, reclaim control over money production and restrain the out-of-control finance sector so that it serves the interests of society, as well as the needs of the ecosystem. The Production of Money examines and assesses popular alternative debates on, and innovations in, money, such as "green QE" and "helicopter money." She sets out the possibility of linking the money in our pockets (or on our smartphones) to the improvements we want to see in the world around us.

economist Josef Steindl. Steindl's work is illuminated through a critical appraisal of its central constructs with a focus on its relevance to current economic conditions. This collection charts the thinking of one of the leading economic theorists of the twentieth century.

It's time to rethink how we create and allocate money. In *Outgrowing Capitalism*, Marco Dondi sheds light on the fact that most people do not have the economic security to focus on purpose and life fulfillment. He proposes that this is not the way things have to be; there is an alternative. In a quest to change our economic system to cater for everyone, he identifies deep issues in how money is created and allocated and connects these to capitalism. He shows that the assumptions and circumstances that made capitalism a success are no longer true today and then describes a new socio-economic model, Monetism. Dondi's solution is to provide a pragmatic roadmap to institutionalize Monetism and solve societal issues that seemed as permanent as time.
