 The input file is just a plain text file, with the extension .tex. It will contain code that the computer interprets to produce a PDF file. The first line of code declares the type of document, in this case is an article. Then, between the 'begin{document}' 'end{document}' tags you must write the text of your document. Note: To learn how to generate the output file see our article on compiling.

 In contrast to Word, you start off with a plain text file (.tex file) which contains LaTeX code and the actual content (i.e. text). LaTeX uses control statements, which define how your content should be formatted. Before you can see what the final result looks like, the LaTeX compiler will take your .tex file and compile it into a .pdf file.

 Templates are meant to speed up the initial creation of a LaTeX document. Often it is the case that the same packages and document structure will be applicable to many of the documents you are working on, in this case using a template will save you the time of having to input all of this information every time you create a new document.

 LaTeX is based on the idea that it is better to leave document design to document designers, and to let authors get on with writing documents. So, in LaTeX you would input this document as: 'documentclass{article}' 'title{Cartesian closed categories and the price of eggs}' 'author{Jane Doe}' 'date{September 1994}' 'begin{document}' 'maketitle Hello world!' 'end{document}'
