What is scar tissue? Scars are marks on the skin or tissue of the body, which form after trauma and can affect skin, muscles, ligaments and tendons. As part of the body's repair process, new protein (collagen) fibers replace the injured tissue and a scar is formed.

Understanding Scar Tissue: What It Is + How To Care For It

Scarring is part of the body's natural healing process after tissue is damaged. When the skin is wounded, the tissues break, which causes a protein called collagen to be released. Collagen builds up where the tissue is damaged, helping to heal and strengthen the wound.

In this "vivid and inspiring" NYT bestseller (Newsweek), the Red Hot Chili Peppers' lead singer and songwriter shares a searingly honest account of life in the rock scene's fast lane -- from the darkness into the light. In 1983, four self-described "knuckleheads" burst out of the mosh-pitted mosaic of the neo-punk rock scene in L.A. with their own unique brand of cosmic hardcore mayhem funk. Over twenty years later, the Red Hot Chili Peppers, against all odds, have become one of the most successful bands in the world. Though the band has gone through many incarnations, Anthony Kiedis, the group's lyricist and dynamic lead singer, has been there for the whole roller-coaster ride. In *Scar Tissue*, Kiedis delivers a compelling life story from a man "in love with everything" -- the darkness, the death, the disease. Even his descent into drug addiction was a part of that journey, another element transformed into art. Whether he's honoring the influence of the beautiful, strong women who have been his muses or remembering the roaring crowds of Woodstock and the Dalai Lama's humble compound, Kiedis shares a compelling story about the price of success and excess. *Scar Tissue* is a story of dedication and debauchery, of intrigue and integrity, of recklessness and redemption -- a story that could only have come out of the world of rock.

Hard to imagine that no one counts, that only things endure. Unlike the seasons, our shirts don't shed, Whatever we see does not see us, however hard we look, The rain in its silver earrings against the oak trunks, The rain in its second skin. --from "Scar Tissue II" In his new collection, the Pulitzer Prize-winning poet Charles Wright investigates the tenuous relationship between description and actuality--"thing is not an image"--but also reaffirms the project of attempting to describe, to capture the natural world and the beings in it, although he reminds us that landscape is not his subject matter but his technique: that language was always his subject--language and "the ghost of god." And in the dolomites, the clouds, stars, wind, and water that populate these poems, "something un-ordinary persists." Scar Tissue is a groundbreaking work from a poet who "illuminates and exalts the entire astonishing spectrum of existence" (Booklist).
