To make great animation, you need to know how to control a whole world: how to make a character, how to make that character live and be happy or sad. You need to create four walls around them, a landscape, the sun and moon - a whole life for them. You have to get inside that puppet and first make it live, then make it perform. Susannah Shaw provides the first truly practical introduction to the craft skills of model animation. This is a vital book in the development of model animation which, following the success of Aardman's first full-length film, Chicken Run, is now at the forefront of modern animation. Illustrated in full colour throughout you are shown step by step how to create successful model animation. Starting with some basic exercises, you will learn about developing a story, making models, creating set and props, the mechanics of movement, filming, postproduction and how to set about finding that elusive first job in a modern studio. Susannah Shaw is Programme Development Manager for the Animated Exeter festival. She was head of the Bristol Animation Course from 1996 to 2000 at the University of the West of England and former camera assistant at Aardman (working on 'A Close Shave' among other films).

Stop-motion puppet animation is one of the most unusual and demanding art forms in the world. It uses a variety of skills, including design, sculpting, metal work, mold making and casting, taxidermy, filmmaking, storytelling and acting, and can be seen in the simplest commercial spots on television to more complex animated shorts and science fiction and fantasy feature films. This work explains research and design of puppets, and details the fabrication of stop-motion puppets around a metal armature skeleton using the build up and foam injection processes. The former technique uses pre-cut blocks of foam formed with a pair of scissors or other instrument into the shape desired and attaching them to the armature. In the latter technique, the character is sculpted in clay over the armature. This clay sculpture is then replaced with foam by using a plaster mold and injection gun techniques. Finishing techniques described include the making of hair, eyes, eyelids, teeth, horns, nails, and chitinous (insect-shell-like) surfaces. The manual also covers the process of creating replacement heads using rubber molds (such as RTV) and urethane castings. A glossary and bibliography complete the extensively illustrated work.

Stop-motion puppet animation is one of the most unusual and demanding art forms in the world. It uses a variety of skills, including design, sculpting, metal work, mold making and casting, taxidermy, filmmaking, storytelling and acting, and can be seen in the simplest commercial spots on television to more complex animated shorts and science fiction and fantasy feature films. This work, with over 200 photographs and illustrations, demonstrates the construction of armatures for film industry stop-motion puppets and the technical aspects of how to machine metal into the desired shape. It describes in detail the milling machine and the metal lathe, the two main tools used in constructing the armature, other cutting tools, and how the anatomical makeup of the puppet determines the armature design. The book then examines the six main types of joints used in armature construction: the sandwich plate ball-and-socket joint, the ball-and-socket collet joint, the step-block ball-and-socket joint, the swivel joint, the hinge joint, and the universal joint. Also described are the different types of metals used in armature construction.

Based on a world-class curriculum and cutting-edge industry practices, Stop Motion Filmmaking offers step-by-step instruction in everything from puppet making and studio set-up to animation and filmmaking. Reflecting exciting advancements in the medium, animator and educator Christopher Walsh focuses closely on digital filmmaking techniques, and offers specific instruction for creating 3D designed and printed puppet components as well as hand-crafted elements. The book is enriched by exclusive online content in the form of detailed tutorials and examples, and by dynamic sidebars and inserts. Further accented by interviews with leading professionals from both the independent and major studio worlds, Stop Motion Filmmaking is designed for dedicated students of the art form, and provides invaluable training for any serious artist who is driven to bring frame-by-frame worlds to life through puppet animation.

Stop-motion animation has long been perceived as a technical practice rather than a creative, demanding art. Though stop-motion requires considerable technical knowledge, it also involves aesthetics and artistry that go beyond the technician's realm. Just as important as puppet mechanics are lighting, filters, lenses, camera angle and placement, and dramatic pose and movement. This manual is a complete guide to the aesthetics of stop-motion animation. Information is organized in an intuitive, easy-to-use structure, following the order an animator uses in setting up and then executing a scene. The first half concentrates on the aesthetics of lighting and cameras, a primary concern in any shot, with details of camera placement, various lenses and myriad lighting techniques. The second half deals with the process of performance art, an oft-overlooked aspect of stop-motion animation. Included is a commentary on body language, facial expression, gesture, movement and emotion—key concepts that are exemplified through the acting process. The work also offers an introduction to narrative form and a glossary of related terms.

Stop-motion Animation teaches the skills required to develop as a creative stop-motion animator. It explores how all the elements of film-making - camera work, design, colour, lighting, editing, music and storytelling - come together in this unique art form. With advice on how to use the particular types of movement, characters and stories that typify stop-motion, this book is packed with tips and suggestions to help you get the most out of your stop-motion films, accompanied by illustrations and case studies demonstrating how film-making masters through the years have used it in feature films, short films and television. This second edition also introduces and explores two of the biggest innovations of recent years - at opposite ends of the industry. At the top-end, for film-makers with serious budgets, there is 3D printing in the creation of replacement parts for stop-motion characters while at the amateur/student end of the industry there are a variety of cheap, but effective, apps that can turn a smartphone into a mini stop-motion studio. The new edition also includes an extended project in each chapter, covering storytelling techniques, selecting an appropriate style, developing a character, set building and lighting, creating a performance and adding music. These projects combine to lead you through the creation of your first one-minute stop-motion animation.

## Read Book Stop Motion Craft Skills For Model Animation Second Edition Focal Press Visual Effects And Animation

Packed with step-by-step tutorials and inside tips and advice from professional animators, Stop-motion Animation is the ultimate handbook for anyone seeking to explore the exciting possibilities afforded by stopmotion animation. With its highly accessible approach and use of inspirational, bang up-to-date examples, the book is guaranteed to appeal to a hip new generation of recreational animators, as well as artists, photographers, and creatives of all stripes seeking new outlets for their creativity. Combining a winning formula of practical instruction and creative inspiration, Stop-motion Animation examines a wide range of stop-motion techniques, covering traditional forms such as claymation and cut-out animation, as well as innovative new techniques that use everyday items such as Lego and post-it notes. Engaging interview-style case studies explore the work of some of today's most exciting stop-motion practitioners, providing readers with an invaluable insight into their working processes, while detailed tutorials illustrate a range of both basic and more advanced techniques, from making a basic puppet to shooting with an iPhone. QR codes (readable from any smartphone) accompany each tutorial, linking directly to online videos which reveal the finished piece of animation, as well as to videos of digital tutorials which provide a moving screen capture. Readers will also learn easy post-production techniques for editing files and creating animated movies on both Macs and PCs.

Be inspired by award-winning animator Barry Purves' honest insight into the creative process of making stop motion animations, using his own classic films to illustrate every step along the way. With Barry's enthusiasm for puppets in all their many guises and in-depth interviews from some of the world's other leading practitioners, there is advice, inspiration and entertainment galore in Stop Motion: Passion, Process and Performance. And there's more! Many of the artists and craftsmen interviewed have contributed their own specially drawn illustrations - showing their inspirations, heroes and passion for their craft. These beautiful images help make the book a truly personal journey into the heart of the animation industry with broad appeal for anyone with a love of animation.

Single frame film-making has been around as long as film itself. It is the ancestor to modern day special effects and animation. Despite its age-old practice, Single frame film making and stop-motion animation continues to influence media and culture with its magic. Current advances in technology and classic stop motion techniques, such as pixilation, time-lapse photography and down shooting have combined to form exciting new approaches. Tom Gasek's Frame-By-Frame Stop Motion offers hands-on experience and various tricks, tips, and exercises to help strengthen skills and produce effective results. Interviews from experts in the field offer not only offer inspiration but also help readers learn how to apply skills and new applications. The companion website offers further instruction, recommended films, tools and resources for the both the novice and the expert.

Introduce kids to stop-motion animation and animated filmmaking. Animation is everywhere--from movies and TV to apps and video games--and today's tech-savvy kids know all about it. With the accessibility and ease of use of cameras and video-editing software, people of all ages are learning how to make stop-motion animation. In "Animation Lab for Kids," artists, teachers, and authors Laura Bellmont and Emily Brink present exciting, fun, hands-on projects that teach kids a range of animation techniques. From the classic zoetrope, flip book, and cel methods (which don't require any devices or technology) to different methods of shooting, the lessons require no previous experience for either child or adult. Experimenting with a variety of art materials (drawing, clay, and paper cut-outs), young animators will learn to plan a film through writing, storyboarding, and creating sets. The book also features helpful and informative sidebars on the history of the early animation techniques as well as the inspiring work of innovative and influential animators, including Kirsten Lepore, PES, Hailey Morris, and William Kentridge. The authors are co-founders and lead teachers of The Good School, an arts-education school that cultivates and combines traditional art-making skills and the technologies involved in stop-motion animation filmmaking. They teach animation techniques at camps, schools, and events, including the New York International Children's Film Festival.
