Stough (public policy, George Mason U.) brings together nine contributions that evaluate the prospects for Intelligent Transport Systems (ITS) to solve the dilemma caused by increasing demands for mobility combined with reluctance to continue to build traditional transportation infrastructure such as highways. These systems encompass a complex of information technologies. The chapters offer case studies of systems deployed in the Washington D.C. metropolitan area and use multi-criteria methodologies to evaluate the cost- effectiveness of the programs. Electronic tolling systems, variable message signs, automatic truck rollover warning systems, and several other technologies are discussed and evaluated. The final chapter applies simulation modeling to estimate the effects the addition of several ITS technologies will have on congestion and mobility in the Northern Virginia region. c. Book News Inc.

The Health Care Policy Process enables the reader to develop a clear understanding of the scope and objectives of health policy studies, to analyze the extent to which policies can be changed or influenced by those involved at the different stages of the policy process, and to assess both the need and the scope for change. The author considers the relationship between planning and policy, looks at key concepts in analyzing health care issues, and examines some of the debates overshadowing today's health policy agenda.

Describes how institutions and markets can best be structured in order to promote innovation in key economic sectors.

Health systems are fluid and their components are interdependent in complex ways. Policymakers, academics and students continually endeavour to understand how to manage health systems to improve the health of populations. However, previous scholarship has often failed to engage with the intersections and interactions of health with a multitude of other systems and determinants. This book ambitiously takes on the challenge of presenting health systems as a coherent whole, by applying a systems-thinking lens. It focuses on Malaysia as a case study to demonstrate the evolution of a health system from a low-income developing status to one of the most resilient health systems today. A rich collaboration of multidisciplinary academics working with policymakers who were at the coalface of decision-making and practitioners with decades of experience, provides a candid analysis of what worked and what did not. The result is an engaging, informative and thought-provoking intervention in the debate. This title is Open Access.
