[The Elements of Modern Architecture - Thames & Hudson](#)

Modernism calls for logic, rational expression and the application of universal principles. The defining principle of modern architecture is known as form follows function, the rule that architecture and design be driven purely by required functionality and not by artistic expression.

[19 Characteristics of Modern Architecture - Simplicable](#)

The basic principles of modern architecture include form following function, clean lines, and a lack of ornamentation. Eventually, modern principles became too cold for everyday living due to an excess of space and the stark nature of the building materials.

This book presents some of the world's greatest modern buildings, from 1950 to the present, dissected and analyzed through specially commissioned freehand drawings.

Examines fifty of the world's greatest modern buildings created since 1950, including the Sydney Opera House, Guggenheim Museum Bilbao, and 41 Cooper Square, supplemented with freehand drawings of each.

This new account of international modernism explores the complex motivations behind this revolutionary movement and assesses its triumphs and failures. The work of the main architects of the movement such as Frank Lloyd Wright, Adolf Loos, Le Corbusier, and Mies van der Rohe is re-examined shedding new light on their roles as acknowledged masters. Alan Colquhoun explores the evolution of the movement from Art Nouveau in the 1890s to the megastructures of the 1960s, revealing the often contradictory demands of form, function, social engagement, modernity and tradition.

Pioneering manifesto by founder of "International School." Technical and aesthetic theories, views of industry, economics, relation of form to function, "mass-production split," and much more. Profusely illustrated.

How climate influenced the design strategies of modernist architects Modern Architecture and Climate explores how leading architects of the twentieth century incorporated climate-mediating strategies into their designs, and shows how regional approaches to climate adaptability were essential to the development of modern architecture. Focusing on the period surrounding World War II—before fossil-fuel powered air-conditioning became widely available—Daniel Barber brings to light a vibrant and dynamic architectural discussion involving design, materials, and shading systems as means of interior climate control. He looks at projects by well-known architects such as Richard Neutra, Le Corbusier, Lúcio Costa, Mies van der Rohe, and Skidmore, Owings, and Merrill, and the work of climate-focused architects such as MMM Roberto, Olgay and Olgay, and Cliff May. Drawing on the editorial projects of James Marston Fitch, Elizabeth Gordon, and others, he demonstrates how images and diagrams produced by architects helped conceptualize climate knowledge, alongside the work of meteorologists, physicists, engineers, and social scientists. Barber describes how this novel type of environmental media catalyzed new ways of thinking about climate and architectural design. Extensively illustrated with archival material, Modern Architecture and Climate provides global perspectives on modern architecture and its evolving relationship with a changing climate, showcasing designs from Latin America, Europe, the United States, the Middle East, and Africa. This timely and important book reconciles the cultural dynamism of architecture with the material realities of ever-increasing carbon emissions from the mechanical cooling systems of buildings, and offers a historical foundation for today's zero-carbon design.

The Modern movement began in the 1920s when a small group of young architects felt all that had gone before should be rejected and that architectural design should start afresh. This fresh start, they declared, should be based on modern technology and a new, modern approach to life. Their innovations became the 20th century's dominant movement in architecture, crystallizing into the international style of the 1920s and '30s. In Exploding the Myths of Modern Architecture, Malcolm Millais explores the forces and factors that led to the emergence of the Modern movement, arguing that it was based on completely false premises. Millais offers a rarely heard perspective on the Modern movement, explaining its failures and how the well-meaning "revolutionaries" behind it gained and maintained power.

In 1896, Otto Wagner's "Modern Architecture" shocked the European architectural community with its impassioned plea for an end to eclecticism and for a "modern" style suited to contemporary needs and ideals, utilizing the nascent construction technologies and materials. Through the combined forces of his polemical, pedagogical, and professional efforts, this determined, newly appointed professor at the Vienna Academy of Fine Arts emerged in the late 1890s - along with such contemporaries as Charles Rennie Mackintosh in Glasgow and Louis Sullivan in Chicago - as one of the leaders of the revolution soon to be identified as the "Modern Movement." Wagner's historic manifesto is now presented in a new English translation - the first in almost ninety years - based on the expanded 1902 text and noting emendations made to the 1896, 1898, and 1914 editions. In his introduction, Dr. Harry Mallgrave examines Wagner's tract against the backdrop of nineteenth-century theory, critically exploring the affinities of Wagner's revolutionary élan with the German eclectic debate of the 1840s, the materialistic tendencies of the 1870s and 1880s, and the emerging cultural ideology of modernity. Modern Architecture is one of those rare works in the literature of architecture that not only proclaimed the dawning of a new era, but also perspicaciously and cogently shaped the issues and the course of its development; it defined less the personal aspirations of one individual and more the collective hopes and dreams of a generation facing the sanguine promise of a new century

In the nineteenth-century paradigm of architectural organicism, the notion that buildings possessed character provided architects with a lens for relating the buildings they designed to the populations they served. Advances in scientific race theory enabled designers to think of "race" and "style" as manifestations of natural law; just as biological processes seemed to inherently regulate the racial characters that made humans a perfect fit for their geographical contexts, architectural characters became a rational product of design. Parallels between racial and architectural characters provided a rationalist model of design that fashioned some of the most influential national building styles of the past, from the pioneering concepts of French structural rationalism and German tectonic theory to the nationalist associations of the Chicago Style, the Prairie Style, and the International Style. In Building Character, Charles Davis traces the racial charge of the architectural writings of five modern theorists—Eugene Emmanuel Viollet-le-Duc, Gottfried Semper, Louis Sullivan, Frank Lloyd Wright, and William Lescaze—to highlight the social, political, and historical significance of the spatial, structural, and ornamental elements of modern architectural styles.
