History of the social determinants of health  
There is a recognition that our health is affected by many factors including where we live, genetics, our income, our educational status and our social relationships - these are known as "social determinants of health." A social gradient in health runs through society, with those that are poorest generally suffering the worst health.

The social determinants of health are the economic and social conditions that influence individual and group differences in health status. They are the health promoting factors found in one's living and working conditions, rather than individual risk factors that influence the risk for a disease, or vulnerability to disease or injury. The distributions of social determinants are often shaped by public policies that reflect prevailing

Social determinants of health - Wikipedia

SOCIAL MODEL OF HEALTH: This model emerged from the social model of disability, which has been strongly advocated by the disability rights movement. It was developed as a reaction to the traditional medical model. The social model of health examines all the factors which contribute to health such as social, cultural, political and the environment.
