Paul Allen: The Singularity Isn't Near | MIT Technology Review

Computer technology advances at a faster rate than many other technologies. Computers tend to double in power every two years or so. This trend is related to Moore's Law, which states that transistors double in power every 18 months. Vinge says that at this rate, it's only a matter of time before humans build a machine that can "think" like a human.

Scientists dramatically call this intelligence explosion the Singularity! This is not to be confused with the term singularity in Physics – which represents an infinitesimally small point from which all of creation came about. But this technological singularity may be just as momentous. How would the singularity happen?
