In The Victorian Internet, Tom Standage examines the history of the telegraph, beginning with a horrifically funny story of a mile-long line of monks holding a wire and getting simultaneous shocks in the interest of investigating electricity and ending with the advent of the telephone. All the early "online" pioneers are here: Samuel Morse, Thomas Edison and a seemingly endless parade of code-makers, entrepreneurs and spies who helped ensure the success of this communications revolution.

Tom Standage's The Victorian Internet, a historical survey of the telegraph from its origins in the optical telegraph of Revolutionary France to the beginning of its eclipse by the telephone in the 1880s, makes a superficially convincing argument that the telegraph fostered a tight-knit culture among mid-19th century telegraphists comparable to contemporary Internet culture.

A new edition of the first book by the bestselling author of A History of the World in 6 Glasses-the fascinating story of the telegraph, the world's first "Internet," which revolutionized the nineteenth century even more than the Internet has the twentieth and twenty first. The Victorian Internet tells the colorful story of the telegraph's creation and remarkable impact, and of the visionaries, oddballs, and eccentrics who pioneered it, from the eighteenth-century French scientist Jean-Antoine Nollet to Samuel F. B. Morse and Thomas Edison. The electric telegraph nullified distance and shrank the world quicker and further than ever before or since, and its story mirrors and predicts that of the Internet in numerous ways.

Today we are endlessly connected: constantly tweeting, texting or e-mailing. This may seem unprecedented, yet it is not. Throughout history, information has been spread through social networks, with far-reaching social and political effects. Writing on the Wall reveals how an elaborate network of letter exchanges forewarned of power shifts in Cicero's Rome, while the torrent of tracts circulating in sixteenth-century Germany triggered the Reformation. Standage traces the story of the rise, fall and rebirth of social media over the past 2,000 years offering an illuminating perspective on the history of media, and revealing that social networks do not merely connect us today – they also link us to the past.

Whatever your favourite tittle, when you pour yourself a drink, you have the past in a glass. You can likely find them all in your own kitchen — beer, wine, spirits, coffee, tea, cola. Line them up on the counter, and there you have it: thousands of years of human history in six drinks. Tom Standage opens a window onto the past in this tour of six beverages that remain essentials today. En route he makes fascinating forays into the byways of western culture: Why were ancient Egyptians buried with beer? Why was wine considered a “ classier ” drink than beer by the Romans? How did rum grog help the British navy defeat Napoleon? What is the relationship between coffee and revolution? And how did Coca-Cola become the number one poster-product for globalization decades before the term was even coined?

The history of the telegraph - the men and women who made it - and its relevance to the current Internet debate Beginning with the Abbe Nollet's famous experiment of 1746, when he successfully demonstrated that electricity could pass from one end to the other of a chain of two hundred monks, Tom Standage tells the story of the spread of the telegraph and its transformation of the Victorian world. The telegraph was greeted by all the same concerns, hype, social panic and excitement that now surround the Internet, and Standage provides both a fascinating insight into the past and a context in which to think rather differently of today's concerns. Standage has a wonderful prose style and an excellent eye for the telling and engaging story. Popular history at its best.

A lighthearted chronicle of how foods have transformed human culture throughout the ages traces the barley- and wheat-driven early civilizations of the near East through the corn and potato industries in America.

From the industrial revolution to the railway age, through the era of electrification, the advent of mass production, and finally to the information age, the same pattern keeps repeating itself. An exciting, vibrant phase of innovation and financial speculation is followed by a crash, after which begins a longer, more stately period during which the technology is actually deployed properly. This collection of surveys and articles from The Economist examines how far technology has come and where it is heading. Part one looks at topics such as the “ greying ” (maturing) of IT, the growing importance of security, the rise of outsourcing, and the challenge of complexity, all of which have more to do with implementation than innovation. Part two looks at the shift from corporate computing towards consumer technology, whereby new technologies now appear first in consumer gadgets such as mobile phones. Topics covered will include the emergence of the mobile phone as the “ digital Swiss Army knife ” ; the rise of digital cameras, which now outsell film-based ones; the growing size and importance of the games industry; and its ever-closer links with other more traditional parts of the entertainment industry; and the social impact of technologies such as text messaging, Wi-Fi, and camera phones. Part three considers which technology will lead the next great phase of technological disruption and focuses on biotechnology, energy technology, and nanotechnology.
