What lies beyond the era of fossil fuels? While most answers focus on different primary energy resources, *Energy Systems in the Era of Energy Vectors* provides a completely new approach. Instead of providing a traditional consumption analysis of classical primary energy resources such as oil, coal, nuclear power and gas, *Energy Systems in the Era of Energy Vectors* describes and assesses energy technologies, markets and future strategies, focusing on their capacity to produce, exchange, and use energy vectors. Special attention is given to the renewable energy resources available in different areas of the world and made exploitable by the integration of energy vectors in the global energy system. Clear definitions of energy vectors and energy systems are used as the basis for a complete explanation and assessment of up-to-date, available technologies for energy resources, transport and storage systems, conversion and use. The energy vectors scheme allows the potential realization of a worldwide sustainable energy system to fulfill global development expectations by minimizing both the impact on the environment, and the international political frictions for access to limited and concentrated resources. *Energy Systems in the Era of Energy Vectors* is an informative read for researchers and advanced students in industrial, energy and environmental engineering. It also contains valuable information for managers and technicians working in the energy sector.

dichotomy of life and death, striving towards the spirit of a dead that may or may not be religious. It is a soul searching process, a coming to terms with hopes and disillusion. Human situations in the flow of globalised urban areas draw together primal human search and economic considerations. The sacred and the profane, the belief in miracles and the management of both, necessitate fresh search of urban pilgrimage.

'One of the most entertaining and profound philosophical novels ever written'
Washington Post On a cold night in Holland two men meet and change each other's lives forever. Max Delius - a hedonistic, yet brilliant astronomer who loves fast cars, nice clothes and beautiful women - picks up Onno Quist, a cerebral chaotic philologist who cannot bear the ordinariness of everyday life. Despite their differences, they fast become great friends. And when they learn they were conceived on the same day, it is clear that their meeting is no coincidence. As the pair fall into and out of love with the same woman - Ada - so their lives become further intertwined. For all three are on a mysterious journey destined to shape human history. The Discovery of Heaven is internationally recognized as a masterpiece. Rich in philosophical, psychological, historical and theological enquiry, it is an extravagant, bold and satisfying novel of ideas. 'Sparkling, irresistible . . . you'll learn a lot from this novel'
The Times 'Anyone who reads The Discovery of Heaven will come away enlightened, challenged and entertained'
Wall Street Journal 'Written carefully and ingeniously by a novelist who is also a poet'
John Updike, New Yorker
