and secondary shaping processes, metal joining methods, surface finishing and heat treatment. The workshop processes covered also include the hand-working processes such as benchwork, fitting, arc welding, sheet metal work, carpentry, blacksmithy and foundry. It also explains the importance of safety measures to be followed in workshop processes and details the procedure of writing the records of the practices. The tools and equipment used in each hand-working process are enumerated before elaborating the process. Finally, the book discusses the machining processes such as turning operations, the cutting tools and the tools used for measuring and marking, and explains the working principle of Engine Lathe. students of degree and diploma engineering. The book has been written in a logical sequence so that the students can move on to complex manufacturing processes after acquiring knowledge about the basics of processes and materials. This will prove to be an ideal textbook for them to face the term end practical and theory tests with confidence. It is advised that the students should go through the relevant chapters before they start out in workshop or attend a theory lecture on these.

KEY FEATURES

In the last half-century, we have witnessed the birth and development of a new era: the information age. Information Technology (IT), the primary vehicle of the information age, has transformed the modern workplace and is pervasive in the development of new knowledge and wealth. IT has also dramatically influenced our capacity to educate. Yet, the application of IT in education has been disorganized and uneven. Pockets of innovation in localized environments are thriving, but the promise of open access, greatly enhanced teaching and learning, and large-scale use has not been realized.

The report points to three high priority action areas that would produce a transitional strategy from our fragmented environment to an IT-transformed future in engineering education--Build Community; Create Organizational Enablers; and Coordinate Action. The report outlines six recommendations, including a call to establish a national laboratory to carry out evidenced-based investigations and other activities to insure interoperability and effective teaching and learning. The report stresses the need to pursue open architectures and to engage multidisciplinary researchers, including social scientists and others
